Function Doors for Your Home

Quality from the basement to the roof

* With up to 49 % better thermal insulation with MZ ThermoPlus compared to a conventional multi-purpose/security door

For new construction and modernisation

Quality steel doors

Hörmann has the right door for all areas in your home: for making the entrance to the basement secure, for workshops or hobby rooms, a child's or teenager's bedroom, a converted loft or as a door connecting the garage with the rest of the house.

Multi-purpose doors

A multi-purpose door must withstand a lot over many years. The MZ multi-purpose door is sturdy, highly durable and weather-resistant, and has been tried and tested for over forty years. It is ideal for both inside and outside. A MZ ThermoPlus door with thermal break is also available and provides up to 49% better thermal insulation compared to a conventional multi-purpose door.

Security doors

Hörmann has the right security door for every requirement – with standard security equipment and an optional door leaf with thermal break for top thermal insulation, e.g. as an external door for cellars, outbuildings and garages.

Fire-rated doors

When it comes to fire protection you can benefit from Hörmann's expertise, not just in commercial or industrial situations but also in the home. Installed between the garage and the house, the WAT fire rated security door can complement your existing internal doors.

Internal doors

Inexpensive and sturdy ZK internal doors are set apart by many advantageous features and can be used for interior spaces, from the basement up to the loft. They are durable, resistant to stains, sturdy, and close quietly and easily. They come in almost any colour and are ideal for modernising your home.
